C;Comment: This chain was isolated from a myeloma protein.
C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kag hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into 1c C;Superfamily: immunoglobulin V region; immunoglobulin homology
C;Keywords: heterotetramer
F;16-94/Domain: immunoglobulin homology < IMM>

The invention relates to antibodies, especially humanised antibodies (see AAW83031-37), recognising the Fas antigen. Such antibodies preferably comprise a heavy chain and a light chain including CDRs (see AAW83024-29) from the heavy and light chains of HFE7A. Humanised antibodies are produced by CDR grafting. The antibodies are capable of inducing apoptosis in abnormal cells expressing Fas, and of
                    chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 - nsed
3B9 was positive. cDNA clones of the 3B9 light and heavy chains were cloned into pGEM7f+ and transformed into E. coli DH5-alpha. A light chai cDNA clone was sequenced (AAQ83490) that encoded the protein given in AARY0189. 3 CDNS (AARX01895-97) were identified. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibodies and proteins bind conserved epitope of Fas antigen - usec to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a complementarity determining region (CDR) of the light chain variable region of murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock,

The antibody is a chimeric or humanised interleukin-4 (II4) monoclonal antibody for the treatment of immunoglobulin B (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic defrantitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft
are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           tratment of allergic rhinitis,

The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, alimination of hymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               represents a murine derived complementarity determining region CDR-2 protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.
                                                                  Murine CD4/CD34 recognizing antibody light chain CDR-2 region #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 31; DB 3; Length 7; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human fas monoclonal antibody HFE7A, or a humanised version of HFE7A containing identical CDRs (complementarity determining regions) to antibody HFE7A. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerilonephitis, articornessis, myocarditis, cardiomyopathy, glomerilonephitis, espection. Sequences AAB14744-B14746 represent CDRs 1-3 of the light chain of the murine anti-human Fas monoclonal antibody HFE7A, which is produced by hybridoma HFE7A (FERM-BP-5828)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains anti-Fas antibody.
                                                                                                                                                                                                                                                                                                                                                   Anti-Fas antibody; monoclonal antibody HFE7A; FERM-BP-5828; murine; complementarity determining region; CDR; human Fas; Fas ligand; apoptosis modulator; programmed cell death; autoimmune disease; allergy; atteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis; hepatitis; AIDS; graft rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. Sequences AAX$9259-61 represent the complementarity determining region (CDR)-1, -2 and CDR-3 fragments in the L chain variable region of the antibody respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mouse; 1F7; antibody; immune modulator; anti-HIV antibody; CDR; complementarity determining region; framework-determining region; FR; heavy chain; light chain; HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 100.0%; Score 31; DB 3; Length 7; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel humanized anti-Fas antibody-like

molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas

ligand system, by binding to Fas on the cell surface, and prevents

apoptosis in cells with a normal system, by inhibiting binding between

captionality antidiabetic, anti-allergic, anti-arthritic, antidiamatory, immunomodulatory, dermatological, immunosupressive, thyromimetic, antidiabetic, anti-antimetrility, neuroprotective,

antirheumatic, nephrotropic, antidifertility, neuroprotective,

antiarteriosclerotic, cardiant and hepatropic activity. (I) induce

apoptosis by binding to cell surface Fas or inhibit it by competitive

inhibition of ligand binding (I) are used to treat and/or prevent

clupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft

versus host disease, Sjorgen's syndrome, permicious or hypoplastic

lupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft

versus host disease, Sjorgen's syndrome, permicious or hypoplastic

anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's

disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,

multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin

dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis,

cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral

(B, C or D) or alcoholic), and transplant rejection. (I) selectively

inhibit apoptosis in normal cells but selectively induce it in abnormal

cells. They bind to both human and murine Fas, so can be evaluated in

murine disease models. (I) act on the active site of Fas, i.e. they mimic

the native ligand, do not induce liver disease, and have reduced risk of

murine disease models. (I) act on the active site of Fas, i.e. they mimic

amurine survivas antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in cells with abnormal Fas-Fas ligand systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    anti-Fas antibody peptide fragment described in the method of

                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a preventive or treating agent for diseases caused by abnormality in the Fas/Fas ligand system containing, as the active component, an antibody having a light chain subunit and a heavy chain subunit and an activity of combining specifically with mammalian Fas and an activity of inducing apoptosis in a cell expressing Fas. The agent has antiallergic, immunosuppressive and apoptocit activity and is used for preventing and treating autoimmume diseases, allergy, atopy and others. The present sequence is that of a peptide useful to the invention
                                                                                    The present invention relates to coding sequences of the murine 1F7 anti-
idiotypic antibody complementarity-determining region (CDR) or framework-
determining region (FR). The antibody binds to human or primate anti-
human immunodeficiency virus (HIV) antibodies and can be used in the
treatment of HIV infection. The present sequence is a region of the 1F7
light chain
New polynucleotide encoding a complementarity- or framework-determining region of an anti-idiotypic antibody that binds to human or primate antihuman immunodeficiency virus (HIV) antibodies, for use in vaccines
                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, mouse, Fas/Fas ligand system, Fas, antibody, light chain,

The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynucleotides encoding different immunoglobulin binding protein (IgBP) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transfected cells, to generate an IgBP that binds to a ligand, and transformed plant cells are selected, and preparing an IgBP argament cells. At least one peptide sequence has at least 75% sequence identity to a framework region (FR) of a native IgM, IgG, IgA, IgC, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein array, preferably plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. insect cells or mammalian cells). The CHBP is useful for the protein array in eukaryotic cells (e.g. insect cells or mammalian cells). The CHBP is useful for the protein array in an array in eukaryotic cells or mannalian cells) and an immunocalian immunoca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Preparing immunoglobulin binding protein array in plant cells by transforming the cells with different polymucleotides encoding binding protein polypeptides specific to ligand, selecting plant cells for preparing array.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          characteristics. The present sequence is a mammalian immunoglobulin derived peptide that may be incorporated into an IgBP of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunoglobulin; antibody; light chain; heavy chain; CDR; FR; complementarity determining region; framework region; IgBP; transgenic plant; immunoglobulin binding protein array; IgM; IgG; IgA; IgD; IgE; IgY; IgM; kappa; lambda; CHBP.

COMO TO TO THE STATE OF THE STA

```
Novel antibody that immunospecifically binds to CD30, useful for treating Hodgkin's disease, exerts a cytostatic or cytotoxic effect on Hodgkin's Disease cell line, and is not monoclonal antibody AC10 or HeFi-1.
                                                                                                                                                                                                                                                                                                                                                                                              The invention describes an antibody (I) that immunospecifically binds to CD30, exerts a cytostatic or cytotoxic effect on Hodgkin's Disease cell line, and is not monoclonal antibody Ac10 or HeFi-1 and does not result from cleavage of AC10 or HeFi-1 with papain or pepsin. (I), a protein (II) that competes for CD30 binding with the monoclonal antibodies AC10 or HeFi, or exerts a cytotoxic or cytostatic effect on a Hodgkins' disease cell line and the mucleic acid encoding the protein (III) are useful for the treatment or prevention of Hodgkin's Disease in a subject, by administering (I) to the subject, in the absence of conjugation to acytostatic or cytotoxic agent, respectively and a pharmaceutically acceptable carrier. This is the amino acid sequence of the mouse AC10 antibody light chain complementarity determining region 2 (CDR2), a polypeptide that completes with AC10 for CD30 binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mouse; chemokine; scFV; CD4 antibody; human immunodeficiency virus; HIV; RANTES; pharmaceutical; infection; acquired immune deficiency syndrome; AIDS; inflammatory; autoimmune disease; gene therapy; immunosuppressive;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a preventive or treating agent for diseases caused by abnormality in Fas/Fas ligand system containing as the active component an antibody having as the light chain subunit a polypeptide containing residues 1-218 of one of 3, 239 residue amino acid sequences, or residues 1-451 of one of 3, 470 residue amino acid sequences, all fully defined in the specification and having an activity of combining specifically with mammalian Fas and an activity of inducing apoptosis in a cell expressing Fas. The agent has immunosuppressive and antiallargic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             allergy, atopy and others. The present sequence is that of a peptide, useful to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drug containing humanized anti-Pas antibody, used for preventing and treating autoimmune diseases, allergy, and atopy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gapa
                                                                                                                                                                          Human; mouse; humanised anti-Fas antibody; Fas/Fas ligand;
light chain subunit; apoptosis; immunosuppressive; antiallergic;
autoimmune disease; allergy; atopic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gene therapy, vaccine, CD30 binding; cytostatic, cytotoxic, Hodgkin's Disease, mouse, AC10 antibody; light chain CDR; complementarity determining region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 31; DB 5; Length 7; 100.0%; Pred. ```
comprising an antibody that immunospecifically binds CD30 and exerts a cytostatic or cytotoxic effect on an activated lymphocyte and a carrier. The method is useful for treating Th_2-lymphocyte related disorders such as atopic dermatitis, systemic lupus erythematosus, atopic aethma.

C chinoconjunctivitis, allergic rhinitis, Omenn's syndrome, systemic solerosis or chronic graft-versus-host disease. The method is also useful for treating Th 1-lymphocyte-related immunological disorders such as rheumatoid arthritis, multiple sclerosis, psoriasis, Sjogren's syndrome, Hashimoto's thyroiditis, Grave's disease, primary bilary cirrhosis, Wegener's granulomatosis, tuberculosis or acute graft-versus host disease or for treating an immunological disorder due to viral infection that involves Epstein-Barr virus, human immunodeficiency virus (HIV), human T leukaema virus, heaptitis b virus or for treating an activated B lymphocyte-related disorder. The present sequence is mouse anti-CD30 antibody (ACIO) light chain complementarity determining region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antibodies that immunospecifically bind CD30 and exert a cytostatic or cytotoxic effect on a Hodgkin's disease cell line, useful for treating, inhibiting or preventing Hodgkin's Disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CD30; cytostatic; cytotoxic; Hodgkin's disease; gene therapy; mouse;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                 The present invention relates to a chemokine construct comprising scFV and a RAWTES chemokine or their fragments. Sequences of the invention are useful for preparing a pharmaceutical composition for treating human immunodeficiency virus (HIV) -infection or acquired immune deficiency syndrome (ALDS) or inflammatory and/or autoimmune diseases. They are used as vaccines and in gene therapy. The present sequence is mouse anti-CD4 VL CDR2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunological disorder; CD30; cytostatic; lymphocyte related disorder; cytocoxic; atopic dermatitis; systemic lupus erythematosus; psoriasis; atopic asthma; rhinoconjunctivitis; allorgic rhinitis; Grave's disease; Omenn's syndrome; tuberculosis; Sjogren's syndrome; multiple sclerosis; graft-versus-host disease; primary biliary dirthosis; viral infection; rheumatoid arthritis; Hashimoco's thyroiditis; Wegener's granulomatosis; human immunodeficiency virus; HIV; therapy; antibody; mouse; CDR;
                                                  New chemokine construct comprising scFV anti-CD4 and a RANTES chemokine, useful for the preparing a composition for treating HIV-infection or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating immunological disorder that is not cancer, in a subject, by administering composition comprising a first antibody that specifically binds CD30 and exerts a cytostatic or cytotoxic effect on activated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of treating an immunological disorder in a subject where the immunological disorder is not cancer. The method involves administering to the subject a pharmaceutical composition

a surface of a proteinaceous material representing a binding surface (epitope) that associates with a predetermined binding surface (epitope) that associates with a predetermined binding surface of a method comprises screening a peptide library with a predetermined binding molecule. The method comprises screening a peptide library with a predetermined binding concerned or a man acids represented by tandem pairs of symbols, and determining clusters of amino acids pairs. Also described are: (i) a condeterminaceous material, which associates with a predetermined binding conteinaceous material, which associates with a predetermined binding conteinaceous material, which associates with a predetermined binding conference). (ii) a method of producing a binding surface on a more of the basic elements of the binding surface of gpl20 that is recognized by a broadly neutralizing antibody, comprising a carrier and one or more of the peptides consisting antibody, comprising a carrier and one or more of the public defined sequence given as SEQ ID NO:1 in the specification, and (iv) a molecule mimetic of the binding surface of gpl20 that is recognized by a broadly neutralizing antibody, obtained by connecting peptides 360-362, 391-396 and 464-468 of SEQ ID NO:1, each in forward or reverse sequence, in such a manner as to form a single molecule that maintains the spatial
                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A method for improved prediction of a region on a surface of proteinaceous material representing a binding surface that associates with a predetermined binding molecule by screening a peptide library with
                CD30 and exert a cytostatic or cytotoxic effect on a Hodgkin's disease. The invention is useful for treating, inhibiting or preventing Hodgkin's disease. The invention is also useful in gene therapy. The present sequence is mouse ACIO CD30 antibody light chain-complementarity determining region (CDR) protein.
  present invention relates to antibodies that immunospecifically bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   invention relates to a method for improved prediction of a region on

This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                       CD4 or CD34 and their use for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides an antibody having affinity to CD4 antigen. Th anti-human CD4 antibody 4H5 is used for the detection of antigen and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes the variable heavy and light chain regions (1) of murine monoclonal antibody (mAB) 1F7. AAY91014 to AAY91016 the represent specifically claimed amino acid sequences of the variable light ending, and AAY91017 to AAY91019 represent specifically claimed amino acid sequence of the variable heavy chain. The antibodies are used for treatment of HIV (human immunodeficiency virus) infection and AIDS (acquired immunodeficiency syndrome). They are also used for detecting HIV in serum and for stimulating HIV antigen related and committed B colls to produce broadly reactive and neutralising antibodies by

Antibodies capable of binding FCEL-bound IgE but which are substantially incapable of binding FCEH-bound IgE or inducing histamine release from mast cells or basophils. comprise a human Kabat CDR domain into which has been substituted a positionally analogous residue from a Kabat CDR domain of the murine anti-huigE antibodies MAEI1, MAEI3, MAEI5 or MAEI7. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                        Antibody; high affinity; FCEH; low affinity; FCEL; IgE receptor; histamine; mast cell; basophil; Kabat; CDR; murine; MAE11; MAE13; MAE15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunoglobulin B; 1gB; anti-human IgE; bispecific antibody; FCEL; FCEH; low affinity binding receptor; high affinity binding receptor; allergy; diagnosis; treatment; histamine release; prevent; light chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a chemokine construct comprising scrv anti-CD4 and a RANTES chemokine or their fragments. Sequences of the invention are useful for preparing a pharmaceutical composition for treating human immunodeficiency virus infection or acquired immunodeficiency syndrome (AIDS) or inflammatory and/or autoimmune diseases. They are used as vaccines and in gene therapy. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New chemokine construct comprising scFV anti-CD4 and a RANTES chemokine, useful for the preparing a composition for treating HIV-infection or inflammatory or autoimmune diseases.
                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
application for drugs. It is highly safe in human dose. The present sequence represents the L chain variable region of the antibody 4H5
                                                                                                                        ..

New polynucleotide encoding a complementarity- or framework-determining region of an anti-idiotypic antibody that binds to human or primate antihuman immunodeficiency virus (HIV) antibodies, for use in vaccines
                                                                                                                                                                                                                                             The present invention relates to coding sequences of the murine 1F7 anti-
idiotypic antibody complementarity-determining region (CDR) or framework-
determining region (FR). The antibody binds to human or primate anti-
human immunodeficiency virus (HIV) antibodies and can be used in the
treatment of HIV infection. The present sequence is the 1F7 light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is an L chain variable region from an immunoglobulin with anti-HIV neutralising activity. See AAN90491-3, and AAN90495. (Updated c25-MAR-2003 to correct PA field.) (Updated on 27-AUG-2003 to correct OS field.) (Updated on 24-0CT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chimeric anti-human immune virus antibodies - contg. mouse variable regions and human constant regions for diagnosis, treatment and prevention of AIDS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the light chain amino acid sequence of a mouse anti-human immunoglobulin E (1gE) antibody. The invention relates to a bispecific antibody that binds specifically to 1gE when 1gE is bound to its low affinity receptor (FCEI), but does not bind to 1gE, when 1gE is bound to its low affinity receptor (FCEH). The bispecific antibody comparises an IgE-binding arm with human framework residues of a recipient human antibody and donor murine CDR (complementarity determining region) residues, but with at least one human CDR residue replacing the analogous murine residue. The antibody also comprises an FV that is specific for a predetermined antigen other than 1gE. The antibodies work by displacing bound 1gE from 1se receptor, or via competitive inhibition of its binding. The bispecific antibodies are used for diagnosis, treatment and prevention of allergy and other IgE-mediated diseases, also, when the signation of FCE from cells (for research or therapy). The bispecific antibodies of the invention do not cause granulation or release of histamine from mast cells

Murine monoclonal antibodies mu 39.1 and mu 5.5 both neutralise HIV. The heavy and light chain variable regions from these antibodies were sequenced (AAR55120-R55123). The murine anti-HIV CDRs were introduced into human framework regions to construct chimeric antibodies (AAR55124-R55127). (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse-human chimeric anti-HIV antibody heavy and light chains - and recombinant antibody consisting of the H- and L-chains, useful in AIDS

The heavy and light chain variable regions from these antibodies were sequenced (AAR55120-R55123). The murine anti-HIV CDRs were introduced into human framework regions to construct chimeric antibodies (AAR55124-

The recombinant antibody light chain has neutralising activity against HIV. Chimeric antibodies comprising both mouse and human sequences are useful in the treatment/prevention of AIDS caused by HIV. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 16-0CT-2003 to standardise OS field)
                                                                                                                                                                                                                              Antibody; heavy chain; light chain; human immunodeficiency virus; HIV; acquired immune deficiency syndrome; AIDS: treatment; prophylaxis; Mus musculus; Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess

The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic allergic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                             Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cluster differentiation, cell separation, antibody, CD4, CD34, leukemia, hematopoietic, undifferentiated, lymphocyte, bone marrow transplantation,

differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                     Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides an antibody having affinity to CD4 antigen. The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents a L chain fragment of the antibody 4H5
                                                                                                                                                                                                                                     This invention describes a novel device (I) for separating cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100.0%; Score 31; DB 3; Length 111; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant (chimeric or single-chain) antibody recognising of CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence represents a murine derived protein fragment which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cluster differentiation, cell separation, antibody, CD4; CD34; leukemia; hematopoietic; undifferentiated; lymphocyte; bone marrow transplantation; HIV infection; autoimmune disease; murine.

The invention relates to a method of treating an immunological disorder in a subject where the immunological disorder is not cancer. The method involves administering to the subject a pharmaceutical composition comprising an antibody that immunospecifically binds CD30 and exerts a cytostatic or cytotoxic effect on an activated lymphocyte and a carrier. The method is useful for treating Th 2-lymphocyte related disorders such as atopic dermatitis, systemic lupus erythematosus, atopic asthma, rhinoconjunctivitis, allergic rhinitis, Omenn's syndrome, systemic sclerosis or chronic graft-versus-host disease. The method is also useful for treating Th 1-lymphocyte-related immunological disorders such as rheumatoid arthritis, multiple sclerosis, psoriasis, Sjogren's syndrome, Hashimoto's thyroiditis, Grave's disease, primary biliary cirrhosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wegener's granulomatosis, tuberculosis or acute graft-versus host disease
                                                                                                                                                          cytotoxic, atopic dermatitis, systemic lupus erythematosus, psoriasis, atopic asthma; rhinoconjunctivitis, allergic rhinitis; Grave's disease; Omenn's syndrome; multiple sclerosis; graft-versus-host disease; primary biliary cirrhosis; viral infection; rheumatoid arthritis; Hashimoto's thyroiditis; Wegener's granulomatosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating immunological disorder that is not cancer, in a subject, by administering composition comprising a first antibody that specifically binds CD30 and exerts a cytostatic or cytotoxic effect on activated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or for treating an immunological disorder due to viral infection that involves Epstein-Barr virus, human immunodeficiency virus (HIV), human leukaemia virus (HIV), human activated by involves Epstein-Barr virus or measles virus or for treating an activated Blymphocyte-related disorder. The present sequence is mouse anti-CD30 antibody (AC10) light chain variable region
                                                                                          Mouse anti-CD30 antibody (AC10) light chain variable region.
                                                                                                                                                                                                                                                                            human immunodeficiency virus; HIV; therapy; antibody; mouse.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes an antibody (I) that immunospecifically binds to CD30, exerts a cytostatic or cytotoxic effect on Hodgkin's Disease cell line, and is not monoclonal antibody AC10 or HeFi-1 and does not result from cleavage of AC10 or HeFi-1 with papain or pepsin. (I), a protein (II) that competes for CD30 binding with the monoclonal antibodies AC10 or HeFi, or exerts a cytotoxic or cytostatic effect on a Hodgkins' disease cell line and the nucleic acid encoding the protein (III) are useful for the treatment or prevention of Hodgkin's Disease in a subject, by administering (I) to the subject, in the absence of conjugation to a cytostatic or cytotoxic agent, respectively and a pharmaceutically acceptable carrier. This is the amino acid sequence of the mouse AC10 antibody light, chain variable region, a polypeptide that competes with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel antibody that immunospecifically binds to CD30, useful for treatin Hodgkin's disease, exerts a cytostatic or cytotoxic effect on Hodgkin's Disease cell line, and is not monoclonal antibody AC10 or HePi-1.
                                                                                                                                                                                                                                                                                                                                                                                                        Gene therapy, vaccine, CD10 binding, cytostatic, cytotoxic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an antibody (I) that competitively inhibits binding of TWEFF#19 to TWEFF2. Also described: (1) a pharmaceutical composition comprising the antibody and a carrier; (2) detecting a prostate cancer cell in a biological sample from a patient by contacting the biological sample with the antibody; (3) inhibiting proliferation of a prostate cancer-associated cell by contacting the cell with the antibody; on a prostate cancer with an antibody to TWEFF2. (I) has cytostatic activity and can be used in vaccines. The antibody, composition and method are useful for treating prostate cancer, and method are useful for treating prostate cancer, e.g. primary prostate cancer, metastatic prostate cancer, locally advanced prostate cancer, metastatic prostate cancer, prostate cancer that has been treated with neoadjuvant therapy, or prostate cancer that is refractory to treatment with neoadjuvant therapy. The present that is refractory to treatment with neoadjuvant therapy. The present

The present invention relates to antibodies that immunospecifically bind CD30 and exert a cytostatic or cytotoxic effect on a Hodgkin's disease. The invention is useful for treating, inhibiting or preventing Hodgkin's disease. The invention is also useful in gene therapy. The present sequence is mouse AC10 CD30 antibody light chain variable region protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        High mobility group box; HWGB1; monoclonal antibody; antibody therapy; sepsis; antibacterial immunosuppressive; graft rejection; arthritis; antibacterial immunosuppressive; graft rejection; arthritis; antiathratic; asthma; antiasthmatic; lupus erythematosus; antiinflammatory; inflammation; dermatological; psoriasis; respiratory distress syndrome; respiratory-gen.; psoriasis; antipsoriatic; chronic obstructive pulmonary disease; pancreatitis; peritonitis; burns; vulnerary; ischemia; vasotropic; Behcets disease; graft versus host disease; inflammatory bowel disease; gastrointestinal-gen.; multiple sclerosis neuroprotective; cachexia; anabolic; infection; musculoskeletal disease; immune disorder.

Generating variant protein for host, by comparing parent protein sequence with natural protein sequences from host, analyzing and substituting amino acids of parent sequences with corresponding amino acid string of
                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for generating a variant protein natural brotein sequence with natural protein sequence with natural protein sequence with corresponding amino acid strings of the parent sequence with corresponding amino acid strings of each of the natural protein sequences, and substituting amino acids of parent protein sequence with corresponding amino acid strings of each of protein sequence on an amino acid string. The method is useful for generating a variant protein, e.g. a variant antibody for a host as compared to a parent protein. The method enables the generation of variant proteins having an increased host string content and reduced immunogenicity. This sequence represents a human variant antibody of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of detecting an HMGB polypeptide in a sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB A box but does not specifically bind to non-A box epitopes of HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HMGB coptein. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, antimitis, or lupus. The present sequence is that of the A box of human HMGB1. An identical

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Generating variant protein for host, by comparing parent protein sequence with natural protein sequences from host, analyzing and substituting amino acids of parent sequences with corresponding amino acid string of
                                 seguence
                                                                                                                                               for a host. The method involves comparing a parent protein sequence with natural protein sequences from a host, analyzing the amino acid strings of the parent sequences from a host, analyzing the amino acid strings of the parent sequences with corresponding amino acid strings of each of the natural protein sequences, and substituting amino acids of parent protein sequences with corresponding amino acid strings of a natural protein sequence on an amino acid string. The method is useful for generating a variant protein, e.g. a variant antibody for a host as compared to a parent protein. The method enables the generation of variant protein shaving an increased host string content and reduced immunogenicity. This sequence represents the variable light chain of a human antibody protein used in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                               유
```

The invention relates to a novel method for generating a variant protein

```
ö
             natural protein sequences from a host, analyzing the amino acid strings of the parent sequence with corresponding amino acid strings of each of the natural protein sequences, and substituting amino acids of parent protein sequences with corresponding amino acid strings of a natural protein sequence on an amino acid string. The method is useful for generating a variant protein, e.g. a variant antibody for a host as compared to a parent protein. The method enables the generation of variant proteins having an increased host string content and reduced immunogenicity. This sequence represents a human germ line variable light chain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Generating variant protein for host, by comparing parent protein sequence with natural protein sequences from host, analyzing and substituting amino acids of parent sequences with corresponding amino acid string of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for generating a variant protein atural protein sequence with natural protein sequence stom a host, analyzing the amino acid strings of the parent sequence with corresponding amino acid strings of each of the natural protein sequences, and substituting amino acids of parent protein sequence with corresponding amino acid strings of an atural protein sequence on an acid string. The method is useful for generating a variant protein, e.g. a variant antibody for a host as compared to a parent protein. The method enables the generation of variant proteins having an increased host string content and reduced immunogenicity. This sequence represents the variable light chain of a
host. The method involves comparing a parent protein sequence with
                                                                                                                                                                                                                                                                                                                                                   Gaps

The framework regions (FR) are derived from the human antibody REI. The CDRs are mouse monoclonal antibody 0.5beta derived sequences. The anti-HIV modified antibody can be used for the prophylaxis and treatment of AIDS. Specific examples of the H chain are given in AAR2456-58 and AAR24560-62. A specific example of the L chain is given in AAR24575
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               recombinant modified anti-HIV antibodies - comprise human x mouse
